SUBJECT INDEX

Abel equation for acoustic pressure 15
Aberration-free thermal lens approximation 35–38, 41, 88, 99–103, 112
Aerosol laser absorption 8–10
Air ionization 10–11
Argon laser 128
Atmospheric monitoring 1–146
Atmospheric refraction 151

Banana self focusing thermal lens 30, 50
Beam overlap region
  beam squeezing 261, 282, 283
  fully inside medium 242–247, 249, 255, 282
  mostly outside 247–249, 255
Brillouin scattering 12, 141

Camera, high-speed 81–82, 128
Carbon dioxide laser (CO_2 laser) 150
  "CO" laser 151
Clausius–Mossotti relationship 11
Combinational light scattering 12, 141
Conjugation fidelity 260, 264
Crystal
  Ce-doped SBN 272, 284, 287, 290
  cell fluid (parametric ring oscillator)
    acetone 280, 283
    carbon disulfide 280–282
  InP:Fe 278
  potassium niobate ($kNbO_3$) 291

Dark line defects 154, 156
  lifetime maps 154
  suppression of
    indium 159
    high and low energy bandgap 161, 167
  velocity 162
Defocusing of laser beam 45–47, 67–87, 87, 99, 107–111, 111–112
Diode laser degradation 153–174
  Also see Dislocation pinning mechanism
    processing/handling-induced flaws 156
  dislocation climb 154
    indium doping 159
  dislocation glide 155
    peierls energy 155
  experimental observations 154
  "facet wearout" 154, 167–172
    catastrophic optical damage (C.O.D.) 154, 170
    device wavelength 170
    facet surface coatings 170
  gradual decline 155, 163–168
    array heat problems 167–168
    current-driven degradation 164–166, 171
    fabrication of semiconductor device 167
    laser cavity length 163
    optically-driven degradation 164, 170, 171
    point defect generation 154, 156
  recombination-enhanced defect reactions "REDR" 154–156, 172
  "phonon kick" model 156
  short lived large energy fluctuations theory "SLEF" 156
  sudden failure 156–163
    dark line defects see darkline defects
    semiconductor fabrication 156–
Diode laser fabrication 153, 167
Dislocation pinning mechanism 159
Distant heat source 123–124
Double-metal topped diode 207–208, 211

Electron beam induced current micrograph "EBIC" 154
Electrostriction effect of laser beams in the atmosphere 43, 67
Energy gaps 223
Extended thermal lens 107, 111, 112, 140

"Fanning" incoherent scattering 238, 245, 273, 274, 276, 278
Fog and cloud clearance 10, 116
Forced temperature scattering 67
Frank–Ginzburg theory 185
Furutsu–Novikov formula 132

Gratings
  Also see radiation (photon) field of a metal/insulator interface, periodically modulated interface, holographic grating fabrication
  holographic 290
  reflection 240, 241
  refraction index 250
  transmission 240, 251

Heat halo 9–10
Holographic grating fabrication 194, 204, 217, 218, 220, 226
  dispersion anomalies 222
Hot electron tunneling 189, 190, 192, 199–204, 208, 219

Inclined laser beam path 117, 136
Inelastic electron tunneling spectroscopy (IETS) 190
Intensity speckles 107, 125, 135
Internal photoeffect (IPE) 193, 218, 219–222

Kerr effect 11, 43, 67
Kolmogorov–Obukhov theory 127, 151

Laser beam coherence
see Thermal blooming
Laser beam energy, characteristics in the atmosphere 41–43
Laser radiation absorption
aerosol absorption 8–10
atmospheric molecular absorption 4–6
cascade ionization 10
convection within medium 18–23, 34, 125–131
forced convection 19–21
convection velocity 21–23
density changes of the medium 23–27
evaporation of water drops 10
kinetic cooling 6–8, 150
light scattering from plasma region 11
multiquantum absorption 10
pre-ionization effect 10–11
sound generation in the atmosphere 13–18, 151
variations with altitude 7, 133
water vapour content 7, 151
Laser spectroscopy 4
carbon dioxide content 151
water vapour content 151
Laser types
light source
argon-ion laser 290
He-Cd laser 271
helium-neon 284, 287
Nd:7AG 278
ruby 283

Mandelshtamm–Brillouin scattering 12, 141
Metal–insulator–metal (MIM) structures 190
bulk plasmon 191
surface plasmon 191
Metal-oxide-heavily doped semiconductor (MOS (P^{2+})) 191
Modeling of laser beam propagation in the atmosphere
Also see Perturbation technique
amplitude perturbations 91–92
approximate method equations 27–47
delay-type algorithm 89–90
diffraction effect 74–75, 77–78
discrete-time compensation 90–91
distant heat source 123
geometrical optics approximation 71–74, 75–77, 80–81, 105–107, 123, 131, 133, 144
numerical simulation 139–141, 141–143, 143–144
phase-conjugate system 87–92, 151
phase-screen approximation 117, 127, 139
probabilistic description 93–97
mathematical
component-wise splitting method 48–49
explicit three-layer differencing algorithm 47–48, 59
smooth perturbation equations 67–71, 120
Momentum gap 222, 225
Monochromator, silica prism 198
Multiple-barrier sandwich triode 226–228
double barrier tunnel triode 226
quantum well structures 227–228
Mutual conjugation 231–291
experimental results
equipment used 287, 290–291
media-photorefractive 234, 238, 287
media-stimulated brillouin scattering 234
mathematical description
convection amplifier 245, 247, 265
one-dimension approach 237–241, 270–271
oscillator 238, 240, 265, 289
three-dimensions approach 242–271, 265–270, 274, 287–
self-pumped four-wave mixing conjugation geometries 232
"bird wing" geometry 234
"bridge" geometry 234
double phase-conjugative mirror 234, 238–240, 242–249, 271–
eason and smout geometry 234
"frog-legs" geometry 234
two coupled double phase-conjugate mirrors 234
two coupled passive ring oscillators 234
two interconnected ring oscillators 265–271, 287–291

Narrow laser beam width 107–119
experimental results 112–117
Nonlinearity parameter 264, 275

Oscillation mode 239
Otto method
See Prism method

Peclet number 93
Perturbation technique for laser beam propagation approximation 38–41, 67–81, 105, 108, 128, 133, 135, 143
Phase conjugation 231–291
experimental results
Also see crystal
equipment used 271–272, 278, 280, 284, 286
media – photorefractive 232, 233, 253, 274, 279, 283, 284
media – stimulated brillouin scattering 232, 233, 280–283
mathematical description
convection amplifier 245, 251, 281
low threshold modes 259
nonlinear theory for parametric ring oscillator 262–264
one-dimension approach 235, 237–241, 259, 279
oscillator 251, 280–283
Riemann method 244, 251, 256
three-dimensions approach 235, 242–271, 274–278, 278, 280–283, 284–
self-pumped four-wave mixing conjugation geometries
"cat" mirror 233–234
double phase-conjugative mirror 271–278
linear passive phase conjugative mirror 233
one-mirror geometry 233, 241, 249–252, 278–279
parametric ring oscillator 233, 240–241, 251, 252–262, 262–265, 279–283
semilinear passive phase mirror 233

"Phonon kick" model 156
Also see Diode laser degradation
Plasma oscillations in metals 176–182
Also see tunnel diodes (MOM); metal-oxide-heavily doped semiconductor
bulk plasmon 177–178
Ferrel mode 178, 181, 219
mie mode 181
surface plasmon
curved surface photon emission 182
experimental results 179, 193–199
fast mode metal/dielectric interface plasmon 179, 202–204, 206
photon-plasmon coupling methods see Prism method
slow mode metallic/oxide interface plasmon 179, 181, 192, 208
Polaritons (dielectrics)
See Plasma oscillations in metals, surface plasmons.
Poynting vector 214, 215
Prism method 180
attenuated total reflection geometry 180, 189, 193, 218, 220, 221 "ATR"

Radiation (photon) field of a metal/insulator interface 182–190
Bremsstrahlung radiation 190
Cherenkov radiation 189–190
dispersion function 184–185
emission caused by current fluctuations 207, 208, 214
methods of approximation 186–187
extinction theorem 188, 223
perturbation method 186–188
Rayleigh wave method 187, 225
periodically modulated interface 186–189, 193, 204
polarization 204, 220
smooth interface 182–183, 199, 218, 220
transition radiation 185–186
tunnel light emissions 222
Riemann method 244, 251, 256

Scanning laser beam perturbations 27, 33, 136
stagnation zone 33, 34, 58
Seeding light beams (scattering) 238, 239, 274
Also see "Fanning"
convective instability 238, 243
oscillator (absolute) instability 238, 240
Self-focusing of laser light 11, 43, 141
thermal self-focusing 43–45
Self-pumped four-wave mixing conjugation geometries
See Phase conjugation, and Mutual conjugation
Short laser pulse 120, 125
instability 71, 144
multimode 78–81
Short-lived large energy fluctuations theory "SLEF" 156
Also see Diode laser degradation
Sound generation by absorption of laser radiation in the atmosphere 13–18
acoustic pressure variation in the laser beam 16, 26
Also see Laser radiation absorption
measurement of 18
theoretical examples 14
Spherical laser waves 111
Structure of the backreflected beam 283, 285–287, 291
"Super-adaptation" 151
"super resolution" 151
Surface plasmon polaritions (metals)
See Plasma oscillations in metals, surface plasmons.

Thermal blooming of lasers 1–146, 150–151
Also see Turbulent medium
defocusing in a turbulent medium 92–107
equations for approximate methods 27–47
instability of thermal defocusing
experimental results 81–87
initial coherence of the laser radiation 78–81, 133
laser beam amplitude effects 105–107
laser beam coherence 111–112, 119, 120–122, 122–125, 142
experimental results 112–117, 122–125
Ring shaped beams in a moving medium 50–53
specific first hermite-gauss functions 53–57
temperature fluctuation effects 103–105, 125–131, 138–139
experimental results 127–131
thermal lens see Thin thermal, Banana self-focusing, Transonic aberration-free
Thermal blooming of lasers
Also see Laser radiation absorption
diffraction of laser beam 122–125
inclined path of laser
